The listed measures represent extrapolated average values that may be slightly different on the product ($\pm 2\% \pm 5$ cm). If a minimum height underneath is required, this must be agreed with Glatz. The measures of the height are determined by the M4 ground socket. Depending on the base you choose, the listed measures change by the height of the corresponding base. The max. wind speed limits as per our separate sheet apply only if the parasol canopy is in a horizontal position and if there is a fix ground anchorage. In the presence of several parasols, the min. distance between one parasol and another and between parasols and walls shall be 25 cm.
